

An Outside-In Look at Early ARPES Experiments: SRC and Beyond

Stephen D. Kevan

Lawrence Berkeley National Laboratory, California

From the perspective of a young graduate student, I will offer some reflections about the early days of ARPES, with a particular focus on the odd cast of characters thrust by common interest into a small bunker outside of Madison. I will then offer a few examples of how this early work drove the development of the techniques into an indispensable tool to study the electronic structure of solids.
