

## SRC Equipment Inspection Policy

The SRC reserves the right to inspect any and all equipment for potentially hazardous conditions before they are installed or operated in the SRC. If a safety hazard is detected during an inspection, the owner will be informed and asked to correct it immediately. If the owner is unable to correct it as determined by the SRC in its sole discretion, they must immediately remove the device from the building or SRC will remove it at the owner's expense and risk. The inspection is solely for the internal purposes of the SRC. The SRC does not warrant, either expressed or implied, that any device inspected by its staff and permitted to be installed or operated in the SRC is safe, is useful for its intended purpose, will not malfunction, or is free from the potential for electrical or other hazards.
